

S.I.N. 360

Where Quality and Affordability Meet.

About Us

2003

S.I.N. Implant System was founded in 2003 in São Paulo, Brazil. Celebrating over 20 years of excellence and innovation in dental implantology.

2011

S.I.N. introduces the **16° Morse Taper** implant design to the market.

2021

S.I.N. Implant System expands to the United States as **S.I.N. 360**, a subsidiary of S.I.N. Implant System.

2022

Partnered with **Claronav** to develop the MicronMapper, a multi-functional device that is re-inventing how the dental industry approaches photogrammetry.

2022

Acquired by **Henry Schein** in 2022, joining the one of the largest portfolios in the world.

Implants *Overview*

Epikut^S

Our standard **Epikut^S** implants feature a cutting-edge design with a tapered body, double helix thread, and self-tapping capability, ensuring high primary stability and optimal osseointegration. This implant is a trusted option amongst doctors for its proven and lasting clinical success.

DAE

PLUS

Epikut^S LONG RA

Our **Epikut^S Long RA** is a specialized dental implant designed for predicatable stability. Its smooth, machined collar combines dual thread technology and a narrow apex to make this one of our most advanced implants.

DAE

Zygomatic^Z

Our **Zygomatic** implants are designed with a smooth polished surface in the cervical area, aggressive and compressive threads, with a sharp apex to facilitate implant insertion; providing superior clinical results for severe cases of maxillary resorption.

DAE

Plus (HAnano)

Our **Plus (HAnano)** hydrophillic implants have double acid-etching with a 20 nanometer (0.02 micrometer) thin layer of a hydroxyapatite coating.

Thinner

Equipped with a nanometric layer of hydroxyapatite crystals.

Faster

HAnano Surface has proven to accelerate bone growth in over 30 in vivo and in vitro studies.

Stronger

Accelerates function of osteoblasts, building more bone in less time.

Epikut^s

Overview

Our standard Epikut^s implant features a cutting-edge design with a tapered body, double helix thread, and self-tapping capability, ensuring predictable high primary stability and optimal osseointegration. This implant is a trusted option amongst doctors for its proven and lasting clinical success.

Epikut^S

LONG

Overview

Our **Epikut^S Long** implant is indicated for intraoral surgical placement in the maxilla, preferably in bones type III and IV (low density bones), for total edentulism cases, post extraction alveolus, immediate and delayed loading.

One Connection, Everything Fits

Figure B illustrates our universal prosthetic connection on all of our Epikut[®] implants

The S.I.N. 360 **16° Morse Taper** internal angulation was first introduced in 2011, and can meet a wide range of restorative needs, offering a comprehensive range of prosthetic options. With a wide array of gingival heights, and a focus on preserving ideal anatomical relationships, our MT design ensures exceptional results across diverse clinical scenarios.

Intraoral Scanners

3shape 

The TRIOS 5 is the smallest, lightest, and most intelligent intraoral scanner made by 3Shape to date. The sleek, pen-grip scanner is perfectly balanced and made to fit comfortably in your hand. Combined with advanced artificial intelligence that improves scan accuracy and removes unnecessary soft tissue.

TRIOS 5

| Calibration free

| LED to indicate readiness

| Smart haptic feedback

| Remote control button

Exocad

exocad

Exocad is a leading dental CAD software used for designing restorations, implants, and orthodontic appliances. It features an open architecture, allowing integration with various scanners, milling machines, and 3D printers.

We offer a 3-day credited course for doctors and lab technicians.

MicronMapper

Overview

MICRONMAPPER

The MicronMapper photogrammetry camera ensures precise alignment for full-arch restorations, improving fit, function, and usability.

Since 2022, our digital support team has been providing premium training for doctors and labs who transition to our MicronMapper digital workflow.

Mill Machines

The imes-icore 350i Loader Plus is a high-precision, automated dental milling machine designed for efficient and continuous production. It features a fully integrated 12-disc changer, allowing seamless, unattended milling of various materials, including zirconia, PMMA, and titanium.

Hyperdent

Burrs

Pro 2

Resin

3D Printers

The SprintRay Pro 2 is a next-gen dental 3D printer that delivers unprecedented accuracy and throughput. With Optical Panel technology and 385 nm UV-A light, the Pro 2 is the most advanced 3D printer engineered by SprintRay.

Furnaces

The Dekema Austromat 674i is a high-end sintering and firing furnace designed for zirconia and high-performance ceramics in digital dentistry. It offers faster sintering cycles, precise temperature control, and advanced automation.

The Dekema Austromat 624i is a high-performance dental furnace used for firing, sintering, and glazing ceramic materials, including zirconia and lithium disilicate.

Consumables *Zirconia*

Overview

Pritidenta offers two distinct zirconia products: priti®multidisc ZrO₂ Multi Translucent PLUS and priti®multidisc ZrO₂ Extra Translucent. Here's a comparison of their key features:

priti®multidisc ZrO₂ Multi Translucent PLUS:

- Composition: Combines 4Y-TZP in the body and 5Y-TZP in the enamel region.
- Translucency Gradient: Ranges from 49% in the enamel to 45% in the body, creating a natural color and translucency gradient.
- Flexural Strength: Typical mean value of $\geq 1,100$ MPa.
- Indications: Suitable for all indications, including highly esthetic monolithic restorations, full-anatomical crowns, partial crowns, bridges up to 14 units, inlays, onlays, veneers, and abutments.
- Aesthetics: Offers a smooth transition between layers, enhancing esthetics and providing a natural appearance.
