

## ADVANCED EXOCAD with Blake Roney

**ZADAMBLAKE** / **S.I.N. 360**

### Course Overview

This advanced, hands-on course is ideal for dental professionals looking to elevate their Exocad skills—for implant cases, crown & bridge design, and full-arch workflows. Led by an experienced trainer, it blends CAD theory with practical, real-world applications, offering full CE credit and networking opportunities.

### Course Highlights

#### Same-Day Full Arch Workflows

Learn how to confidently design and deliver full-arch, direct-to-multi-unit provisionals on the day of surgery. We'll walk through the entire process—from importing scan data to finalizing your design—so you can cut turnaround times without cutting corners.

#### Photogrammetry-Driven Precision

Discover how to integrate photogrammetry data into your workflow to achieve ultra-passive fits. Multiple surgical workflow are covered, such as bone fixation screws, CBCT bite technique, 360 denture scans, and AOX without IOS.

#### Advanced Techniques & Tools

Take your Exocad skills to the next level with tips, tricks, and tools from exocad 3.2. You'll learn how to utilize virtual articulation, optimize your library setups, incorporate 3D face scans, and test out the exocad 3.3 prototype.
